

The Startup SEO Checklist

The fundamentals that help people (and AI) find your new business.

Part of the free Founder Launch Pack — yours to keep, share, and act on. No strings, no lead farming.

Technical foundations

- Every page has a unique, descriptive (under ~60 characters)
- Every page has a meta description (under ~155 characters)
- One clear per page that matches the page's intent
- Clean, readable URLs (use words, not random IDs)
- Site loads fast on mobile — compress images, minimise scripts
- Mobile-responsive layout that works on small screens
- HTTPS enabled (secure padlock)
- XML sitemap created and submitted to Google Search Console
- robots.txt present and not accidentally blocking your site

Content & keywords

- Identify 5–10 phrases your customers actually search for
- Write one focused page or post per main topic
- Use clear headings (H2/H3) that include relevant terms naturally
- Answer real questions — great for both Google and AI search
- Add an FAQ section with concise answers
- Link related pages together (internal linking)
- Write for humans first; never keyword-stuff

Structured data & AI search

- Add Organization / SoftwareApplication schema to your homepage
- Add FAQ schema to pages with question-and-answer content
- Add Article schema to blog posts (author, date, headline)
- Use Open Graph tags so links preview nicely when shared
- Keep key facts in clear text (not locked inside images)

Off-page & ongoing

- Claim your Google Business Profile (if local)
- Get listed in relevant directories and communities
- Earn a few quality backlinks from real, relevant sites
- Publish consistently — a steady cadence beats bursts
- Review Search Console monthly and double down on what works

Good news: the Igotdomain site is already built with semantic HTML, schema markup, sitemaps and AI-friendly content structure — read more in our [blog](#).
